Paas Capabilities

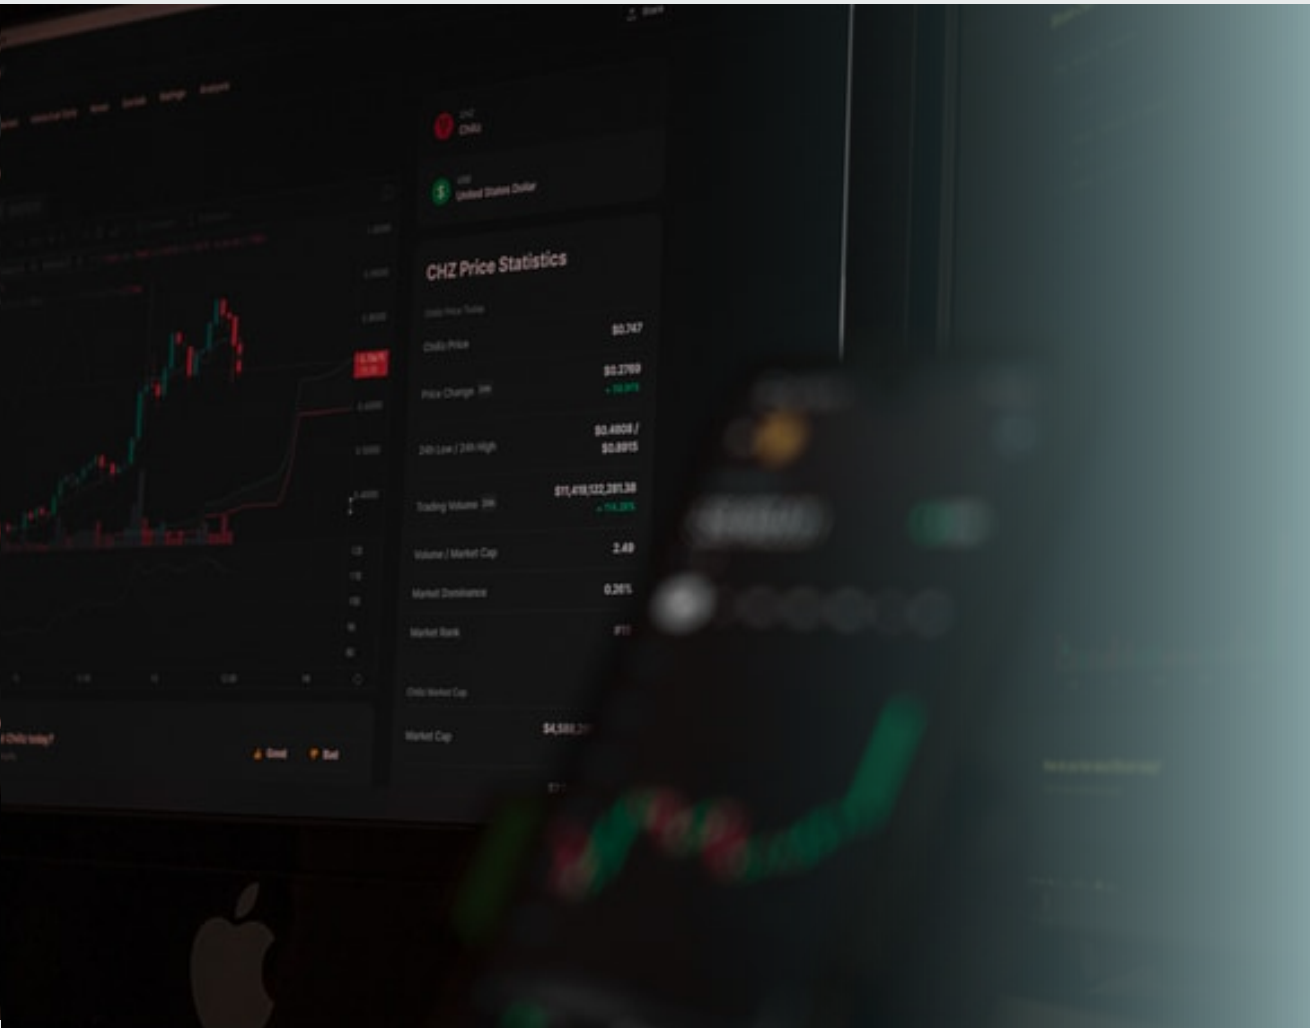

inerGvault

The most current community release of the OSDU™ Data Platform. This transformational industry standard data platform can ingest, catalogue and govern data from departmental silos and makes all data discoverable and usable to support the world’s changing Energy needs.

inerGvault +

Schema extensions and domain services for oil & gas production, economics, land/lease and market risk. It incorporates ingestion service DAGs for well history, financial, production, reserve forecast, market data and field facilities data delivered on top of core services of inerGvault along with engine services to produce synthetic data. Its domain content and services will be continually enhanced to provide intelligence and timely insights to SaaS applications for self-healing and auto forecasting to drive risk adjusted top asset performance with consistency.

Cloud Service Providers

Our platform and products, the digital tools our partners build and the solutions our customers shape and integrate will reimagine energy. Collectively we will reshape the future energy landscape with simplified planning, funding, developing and managing assets.

We are passionate about user experience with simplicity and exponential scalability, high performance and reliability with cost efficiency. We are committed to transparency and immutability for on demand auditability and uncompromising security considerations to address modern threats.
